

THE UNITED REPUBLIC OF TANZANIA
NATIONAL EXAMINATIONS COUNCIL OF TANZANIA
CERTIFICATE OF SECONDARY EDUCATION EXAMINATION

031/2C

PHYSICS 2C

(ACTUAL PRACTICAL C)

(For Both School and Private candidates)

Time: 2:30 Hours

Year: 2022

Instructions

1. This paper consists of **two (2)** questions.
2. Answer **all** questions.
3. Each question carries twenty **five (25)** marks.
4. All writing must be in **blue** or **black** ink **except** drawing which must be in pencil.
5. Cellular phones, and any unauthorized materials are **not** allowed in the examination room.
6. Write your **Examination Number** on every page of your answer booklet (s)

1. You are provided with a knife edge, metre rule, two strings of 20 cm, each 50 g and 100 g masses. Perform experiment following procedures (a) to (e).
 - (a) Balance a metre rule on a knife edge, mark the balancing point, write letter G at the balancing point using a pencil.
 - (b) Use a Vernier calliper to determine the thickness, t and the width, w of the metre rule.
 - (c) Place the metre rule on a knife edge so that the knife edge is at 65 cm mark. Suspend the given 100 g mass at a point which balances the metre rule. Record the distance between the knife edge and G as a cm, and between the knife edge and the position of 100 g mass as y .
 - (d) Suspend the mass of 50 g on the left hand side of the knife edge at the position 45 cm and the adjust the position of 100 g mass to balance the metre rule as shown in Figure 21. Record the new value of y and then record the distance between the 50 g mass and the knife edge as x .

- (e) Repeat the procedures in 1 (d) by changing the position of 50 g to 40 cm, 35 cm, 30 cm and 25 cm. Answer the following questions:
 - (i) Tabulate the results of x (in cm) and y (in cm).
 - (ii) Plot a graph of y against x .
 - (iii) Determine the slope of the graph.
 - (iv) Calculate the value of z from your experimental results given that,

$$y = Sx + \frac{z + a}{100}.$$

(v) State the physical significance of z .

(vi) State the aim of doing this experiment.

2. Determine the resistivity of the material of the wire provided from the following procedures:

(a) Use the micrometre screw gauge to determine the diameter of the given wire and hence find its cross section area in m^2 . Connect the circuit as shown in Figure 26 where C is a crocodile clip. Measure the length of wire $L = 100 \text{ cm}$ and clip it so that the current flows across the wire. Record the voltmeter reading V .

(b) Repeat the procedures in 2 (a) with crocodile clip at $L = 80 \text{ cm}$, 60 cm , 40 cm and 20 cm . Record the corresponding voltmeter reading in each case.

(i) Tabulate the values of L , V , $\frac{1}{L}$ and $\frac{1}{V}$. (The length L should be in metres).

(ii) Plot a graph of $\frac{1}{V}(V^{-1})$ against $\frac{1}{L}(L^{-1})$

(iii) Determine the slope S .

(iv) Find the value of V for which $\frac{1}{L} = 0$ and state its physical meaning.

(v) Determine the value of resistivity of the wire given that, $\frac{1}{V} = \frac{A}{\rho E} \frac{1}{L} + \frac{1}{E}$.
